

# Sample Vitals & Lab Report

## Patient Information

Name: Jane Doe  
Date of Birth: 02/15/1985  
Date of Service: 09/10/2025  
Ordering Physician: Dr. Mark Stevens

## Laboratory Results

| Test                 | Result                   | Normal Range | Note          |
|----------------------|--------------------------|--------------|---------------|
| Hemoglobin           | 11.2 g/dL                | 12–16 g/dL   | Low           |
| WBC                  | 7.5 x10 <sup>3</sup> /μL | 4.0–11.0     | Normal        |
| Platelets            | 280 x10 <sup>3</sup> /μL | 150–450      | Normal        |
| ALT                  | 75 U/L                   | 7–56         | High          |
| AST                  | 68 U/L                   | 10–40        | High          |
| Alkaline Phosphatase | 95 U/L                   | 44–147       | Normal        |
| Total Bilirubin      | 1.0 mg/dL                | 0.1–1.2      | Normal        |
| Creatinine           | 1.2 mg/dL                | 0.6–1.3      | Normal        |
| BUN                  | 22 mg/dL                 | 7–20         | Slightly High |
| eGFR                 | 78 mL/min                | ≥90          | Mildly Low    |
| Fasting Glucose      | 128 mg/dL                | <100         | High          |
| HbA1c                | 6.6%                     | <5.7%        | High          |
| Cholesterol - Total  | 195 mg/dL                | <200         | Borderline    |
| LDL                  | 120 mg/dL                | <100         | Slightly High |
| HDL                  | 45 mg/dL                 | >40          | Normal        |
| Triglycerides        | 160 mg/dL                | <150         | Borderline    |
| Blood Pressure       | 138/86 mmHg              | <120/80      | Elevated      |
| Heart Rate           | 82 bpm                   | 60–100       | Normal        |
| Temperature          | 98.2°F                   | 97–99        | Normal        |
| BMI                  | 29.4                     | 18.5–24.9    | Overweight    |

## Question & Answer Summary

**What are my abnormal lab values?**  
Low hemoglobin, high ALT & AST, high fasting glucose and HbA1c, slightly high BUN, mildly low eGFR, borderline high LDL & triglycerides, elevated blood pressure.

**Explain my liver function tests.**

ALT (75) & AST (68) are higher than normal, suggesting irritation or inflammation. Other values are normal, which is reassuring.

**Do I have any diabetes indicators?**

Yes. Fasting glucose (128 mg/dL) and HbA1c (6.6%) fall into the diabetes range.

**What should I discuss with my doctor?**

Elevated liver enzymes, diabetes management, kidney function, blood pressure, cholesterol, and anemia workup.

**Are my kidney function tests concerning?**

Creatinine is normal, but BUN is slightly high and eGFR mildly reduced, suggesting early kidney stress worth monitoring.
